DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Joannopoulos et al.

With respect to claim 1, the cover figure of the reference teaches a photonic crystal structure formed in layers 504, 506, 508. Layer 504 is n-type (column 7, lines 50-54). The device is a light emitting device (abstract). It would have been obvious to fabricate the device in a III-nitride semiconductor, instead of GaAs, because III-nitride materials are well-known semiconductors, and because the materials have known advantages such as different refractive indexes that would allow optimization of the emitted light. With respect to claim 2, the planar lattice of holes 510 creates a periodic variation in thickness, because the thickness is zero at the hole. With respect to claim 4-7, it would have been obvious to optimize the size and spacing of the holes in the prior art device, in order to obtain variation in the output characteristics.

Allowable Subject Matter

Claims 8-32 are allowed.
